Safe Inspection of Solar Installations with High Voltage

Solar installations (also known as photovoltaic or PV installations) are becoming increasingly high-voltage in order to reduce costs and improve the efficiency of power generation systems. As a result, it is important to select measuring instruments that support higher voltage measurement to protect the safety of inspection workers. The P2000 enables high voltage measurement up to CAT III 2000 V by simply connecting to a compatible Hioki clamp meter or digital multimeter.

Why is CAT III 2000 V capability necessary?

According to the standards for Photovoltaic (PV) module safety qualification (IEC 61730-1), PV modules are treated as the overvoltage category III, and a measuring instrument in the measurement category III is required. Using instruments that can accommodate the appropriate measurement category serves to protect workers and equipment from serious accidents such as electric shock and burnout. Currently, adoption of 1500 V solar installation is growing, but instruments that can accommodate even higher voltages will be necessary in the future as larger and even more efficient systems enter into use. Hioki developed the P2000 to support CAT III 2000 V measurement in response to the near-term prospect of such applications.

About the Marks

	Safety standard measurement categories*
	Drop proof Robust design capable of withstanding a drop from a height of 1 m onto concrete
	Backlight
	Auto power OFF Automatically turns off after a certain time
	Display hold
	True RMS True RMS measurement for accurate measurement of even distorted current waveforms
	Low-pass filter Cuts high frequency content to provide stable numerical values for measurement
	AUTO AC/DC Automatically detects and measures AC and DC voltage
	MAX/MIN/AVG value* Displays the maximum, minimum, and average of the displayed values
	Peak measurement* Displays the wave maximum and minimum peak values
	Flexible current sensor can be connected
